

NEW Double Air Curtain for Cylinder Seeder

The Double Air Curtain Assembly is easy to install on your Cylinder seeder and will make it more accurate, especially on hard-to-sow seeds such as marigold. The kit is easy to install. Cost is \$300.

The double air bars are positioned closer to the cylinder head surface for a more concentrated and directed stream of air to blow off any doubles. The closer position and double style also allows for the air-stream to be angled away from the seed inventory so higher pressure may be used without displacing seed in the tray.

In conjunction with the Double Air Curtain kit, Blackmore also has an upgraded [Seed Recovery System](#). It makes seed recovery, and therefore change-overs, much

FASTER.

Both these features are standard equipment on new Cylinder seeders, but may also be retro-fitted.
