

Blackmore Marigold Kit/Drop Tube

The Marigold Kit for the Blackmore Turbo Seeder facilitates sowing of seeds larger than pepper (capsicum) such as marigold, dahlia, zinnia, gerbera daisy, cucumber, melons, squash, pumpkins, etc., that will not drop through the standard aluminum drop tube. The clear plastic Marigold Drop Tube permits the seeder operator to easily see if any seed hangs up in it. The Drop Tube may be used without the special seed inventory tray.

The Marigold kit consists of the following items:

- Clear plastic drop tube with special socket head mounting screws and wrench
- Special seed inventory tray with higher “hump” dividers to orient marigold or other long skinny seeds so they are not criss-crossed, rather 2-3 may slide between the humps to effect single pick up by needle tips

The marigold type drop tube is also typically used for sowing trays with counts less than 128. The special seed tray is used only for sowing “sliver” shaped seeds. Needle tips are used to pick up and drop seeds down the marigold drop tube

When ordering a Marigold Drop tube, please specify how many slots are in your seed inventory tray. For example: for a 128 Marigold tray to be used with a 14 slot tray, you would specify a 128-14 Marigold drop tube.
